Choosing the Right License

Task 1 (20+5 minutes)

1. Read the described scenarios
2. Choose a license you would use for the project
3. Why did you choose this license?

Scenario 1

You develop an open-source project that uses libraries published under MIT license, Apache 2.0, and LGPL v2.1.

Scenario 2

You develop an open-source project that uses libraries published under MIT license and MPL 1.1.

Find the error

Task 2 (10+5 minutes)

1. Read the described scenario
2. What is the problem? Why is it a problem?
3. How would you solve this?

Scenario

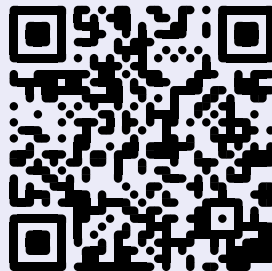

You develop an open-source project that is published under LGPL v3+. You are using libraries with MIT, MPL 1.1, Apache 2.0 licenses. You are also using pictures in the public domain.

Strong and Weak Copyleft

Task 3 (15+5 minutes)

1. What is the difference between copyright and copyleft?
2. What is the difference between strong and weak copyleft?
3. Try to imagine different types of weak copyleft
4. Read the blog post and compare the listed types with your ideas

Blog

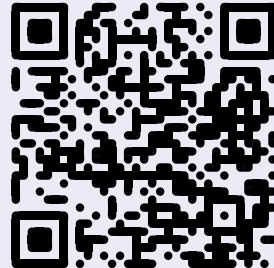

Creative Commons

Task 4 (15+5 minutes)

1. You want to publish your Bachelor's Thesis under LGPL v3+. You also want to include pictures
2. What is the problem? Why is it a problem?
3. Which CC licenses can you include in your work?

CC Licenses

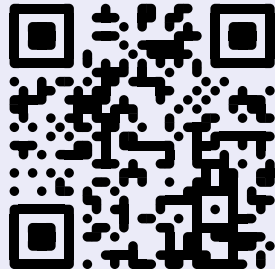

Real-World Open-Source Projects

Task 4 (10+5 minutes)

1. Choose a big open-source project of your liking
2. What license does it use? Why does it use this license?
3. Have there been changes in the past? Is the change process formalized?

Exemplary Open-Source Projects

Take Home: Cars

Task 5

1. Cars today include a lot of software
2. Does your car use open-source software?
3. Do you find the included licenses?
